

## Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact [support@jstor.org](mailto:support@jstor.org).

As a result he recognizes eight species as follows, with the number of subspecies into which each is divided: *sulphurescens*, with six subspecies; *cinereiceps*, with two; *peruvianus*, with two; *marginatus*, two; *megacephalus*, one; *poliocephalus*, three; *grisescens*, one; and *flaviventris*, three. There is a full synonymy and discussions of relationship, with reprints of a number of the original descriptions.—W. S.

**Recent Papers by Bangs and Penard.**—These authors have recently considered the proper name for the Common Jungle Fowl<sup>1</sup> and decide that it should be *Gallus gallus gallus* (Linn.), the fact that this name was based upon a domestic variety in no way invalidating it. They select Bengal as the type locality. The other two races will therefore become *G. g. bankiva* Temminck, from Sumatra, and *G. g. ferrugineus* (Gmel.), from China.

Mr. Penard calls attention<sup>2</sup> to some untenable names. One, *Planchesia fusca* (Bodd.), is preoccupied and, as there is no other available, he proposes *P. pullata* (p. 21). *Muscicapa sibirica fuliginosa* (Hodgson) being also preoccupied, *M. c. cacabata* (p. 22) is proposed. For the same reason *M. ferruginea* (Hodgson) becomes *M. cinereiceps* (Sharpe) and *Eophona melanura melanura* (Gmel.) becomes *E. migratoria pulla* (p. 22), nom. nov. In another paper,<sup>3</sup> Mr. Penard describes as new from Mt. Roraima, British Guiana: *Chloronerpes rubiginosus roraimae* (p. 29) and *Tanagra violacea rodwayi* (p. 30).

Mr. Bangs has also proposed<sup>4</sup> as a new form, *Buteo lineatus eximius* (p. 35) from the Florida Keys.—W. S.

**Van Oort's 'Birds of Holland.'**<sup>5</sup>—Part 5 and the plates of Part 6 of Dr. Van Oort's notable work are now before us, the text to the latter to appear with Part 7. The ten plates of Part 5 illustrate the geese and brant, while those of the next part comprise the Sheldrakes (*Casarca* and *Tadorna*), the Mallard, Gadwall and three species of Teal. The various plumages are fully illustrated, including the summer or "eclipse" plumage of the males, in such species as exhibit this interesting phase. The high standard of both text and plates as described in reviewing the earlier parts is fully maintained.—W. S.
